MONTHLY WEATHER MAP

JUNE 1960

LIBRARY
AUG 12 1960
WEATHER BUREAU

General Summary of Weather Conditions

Exceptionally fine June weather in the Atlantic Provinces, fairly normal conditions in Central Canada, and hot, dry weather in southern British Columbia were the features of June 1960 in Canada. The greatest departures from normal temperature were experienced in the central Northwest Territories where a large area was eight degrees or more above normal temperature. On the other hand, in the coastal and northern section of British Columbia, and throughout much of central Alberta and Saskatchewan, temperatures were more than two degrees below normal. Relatively heavy rains were experienced in a band from the Pacific to the Atlantic between latitudes 55 and 60, but with the exception of Ontario and southern Quebec, most of the country had less precipitation than normal in June 1960.

The absence of an upper-level trough near the west coast of the United States, and continued blocking action over Baffin Island in the northeast Arctic, were the two important controlling features of the month's weather in Canada. The absence of the west coast trough resulted in a stronger than normal air flow across the Western United States and Southwestern Canada producing below normal temperatures in central and northern British Columbia, as well as in most of the grain area of the Prairie Provinces. The blocking action in the northeastern Arctic produced a high frequency of cyclonic activity near the Great Lakes, resulting in considerable rainfall in Ontario, but further east in the Atlantic Provinces there was a minimum of synoptic-scale storm activity, and a pleasant month was the result.

The weather was unsettled in British Columbia in June; while the extreme southern part of the interior had above normal temperatures, the rest of the Province experienced conditions from two to three degrees below normal. For the month as a whole, Lytton was the warmest location in the Province averaging 65°F., while the highest temperature reported in B.C. was 82° at Penticton.

Cyclonic activity along the north Pacific Coast produced generally above normal precipitation in British Columbia, while most of southern British Columbia experienced very dry conditions. In coastal areas on southeastern Vancouver Island, on the lower mainland, and in the Okanagan and Kootenay Basins, precipitation was only one-third to one-half of the normal amount for the month. Wind speeds were remarkably light in southern B.C., and sunshine normal.

Temperatures in the central part of the Prairie Provinces, from the Peace River through Edmonton to Regina, were generally two to three degrees below normal for the month, while conditions were close to normal in southern Manitoba. In northern Manitoba, temperatures averaged three to four degrees above normal, and in southwestern Alberta it was slightly warmer than normal. There was almost a complete absence of warm weather in northern Alberta as cloudy skies and high winds added to the disconfort.

While abundant precipitation fell across the northern part of the Prairie Provinces, and in central Saskatchewan, there were areas in southern Alberta and southern Manitoba where the rainfall amounted to less than half the normal for June. Negative departures from normal of sixty to eighty per cent were reported in Alberta south of Calgary and Alaask. On the other hand, the Peace River country had record-breaking rainfall as several stations reported in excess of six inches during the month. In the southern Prairies, rainfall at Regina was slightly in excess of five inches - the wettest June in fifteen years. Hail was reported at a few points in Saskatchewan on June 16th and 25th, and there were severe hailstorms in central and northern Alberta on June 24th and 25th.

An abundance of precipitation fell in the Ottawa River basin of northeastern Ontario and northwestern Quebec. Several stations reported more than twice as much precipitation as normally expected, and Montreal River, Ontario had 10.58 inches, which was the heaviest fall in the country for June 1960. Most of northern Ontario, the Ottawa-Montreal region and the Lake St. John basin of Quebec had deficiencies of thirty to fifty per cent. Temperatures were slightly below normal over most of southern Ontario, while in Quebec and the remainder of Ontario there were temperature excesses of about two degrees. The average temperature for the month at Montreal was 67 making it the warmest location in the country. A 93-degree temperature was reported from Delhi, Ontario, which was the highest for any day across the nation in June 1960. The extreme southwestern portion of Ontario reported violent thunderstorms on June 11th, and a tornado on June 16th, which traced out a path from Courtright to Forest just east of Sarnia. As a result, precipitation was excessive in this region, with excesses ranging from forty to one hundred and fifteen per cent above normal.

June was a pleasant month in the Atlantic Provinces as there were fewer than normal major cyclonic storms along the Atlantic seaboard. Conditions were nearly ideal for agriculture. In Nova Scotia, hay-making proceeded apace and the strawberry crop was reported to be the best in years, while in Newfoundland farmers reported crops two weeks earlier than normal.

Although precipitation in the Atlantic Provinces was near normal, it was caused by local thunderstorms due to instability and the rain usually occurred at night. Hours of bright sunshine throughout the region were well above normal. Temperatures over the area averaged two to three degrees above normal, except in northern Newfoundland where there were larger excesses of four to six degrees.

Temperatures nine degrees above normal were reported from Cambridge Bay and Baker Lake in the Northwest Territories. As well as being warmer than normal, all of Northern Canada had less than normal precipitation except in the immediate Frobisher Bay area. Alert, the farthest north station, again was the coldest in the country with an average temperature of 32, and an extreme low of 18. The snow cover was practically gone by the end of June with only three stations reporting snow on the ground on June 30th.

JUNE 1960

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
